

LIVE MIGRATION ANYWHERE

The Power of Mobility at Your Fingertips

Reduce Labor & Complexity

Application-agnostic replication allows seamless migration of even the most complex workloads from any physical, virtual, or cloud infrastructure. As a result, there is a significant reduction in time, labor, and specialized skill sets needed for migration projects.

Shorten Cutover Window to Minutes

Continuous Data Replication operates in the background, with no system performance disruption. Cutover takes place as planned in advance within minutes, without requiring reboot of source machine(s).

APIs & Postscripts for Automation and Optimization

Designed for large-scale migrations, CloudEndure enables automated data replication from thousands of machines simultaneously without any performance impact. The entire migration lifecycle, including APIs and post-migration scripts, can be managed via a single pane of glass.

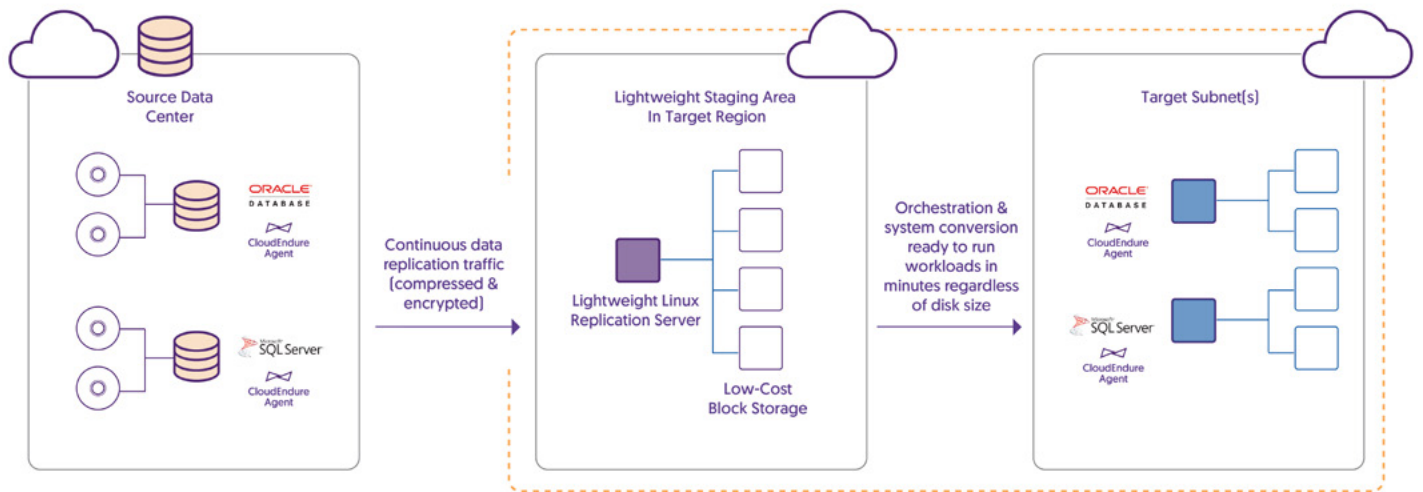

Predictable & No-Risk Cutover

Non-disruptive testing assures confidence before cutting over to the target infrastructure. Workloads are replicated according to the highest security standards, then migrated with 100% data integrity at the click of a button.

How CloudEndure Live Migration Works

CloudEndure enables organizations to replicate any workload, including legacy applications and complex databases, from any physical, virtual, or cloud-based infrastructure without downtime, disruption, or data loss. Using continuous block-level replication, one-minute image conversion, and automated orchestration, CloudEndure simplifies the migration process, minimizes cutover windows, and eliminates the potential for human error. Even in cases of large-scale projects, CloudEndure ensures on-time, on-budget migrations, with 100% data integrity.

"We were really worried about migrating our huge MySQL databases, but in the end we didn't have any problems. Our servers just booted up and worked perfectly. It took about five minutes to cutover."

Craig Sutter, CTO at Vetsource
