CloudEndure

aws

AUTOMATED MASS MIGRATION

Simplify and Expedite Your Cloud Migration

Designed for Mass Migrations

CloudEndure simplifies your large-scale migration project by replicating thousands of machines simultaneously, and automatically converts your applications so that they run without compatibility issues on AWS. CloudEndure Migration easily plugs into migration factories and cloud COEs.

Any Application From Any Source

CloudEndure performs equally efficient replication for any application running on supported operating systems. Cross-infrastructure machine conversion and automated orchestration launch fully operational applications and databases from any source in any AWS Region.

Reduce Labor & Complexity

Rapidly migrate from physical, virtual, and cloud-based infrastructure to AWS using a single migration solution. Automated, OS-level replication means you won't need specialized cloud development skills or significant IT resources to successfully implement complex projects.
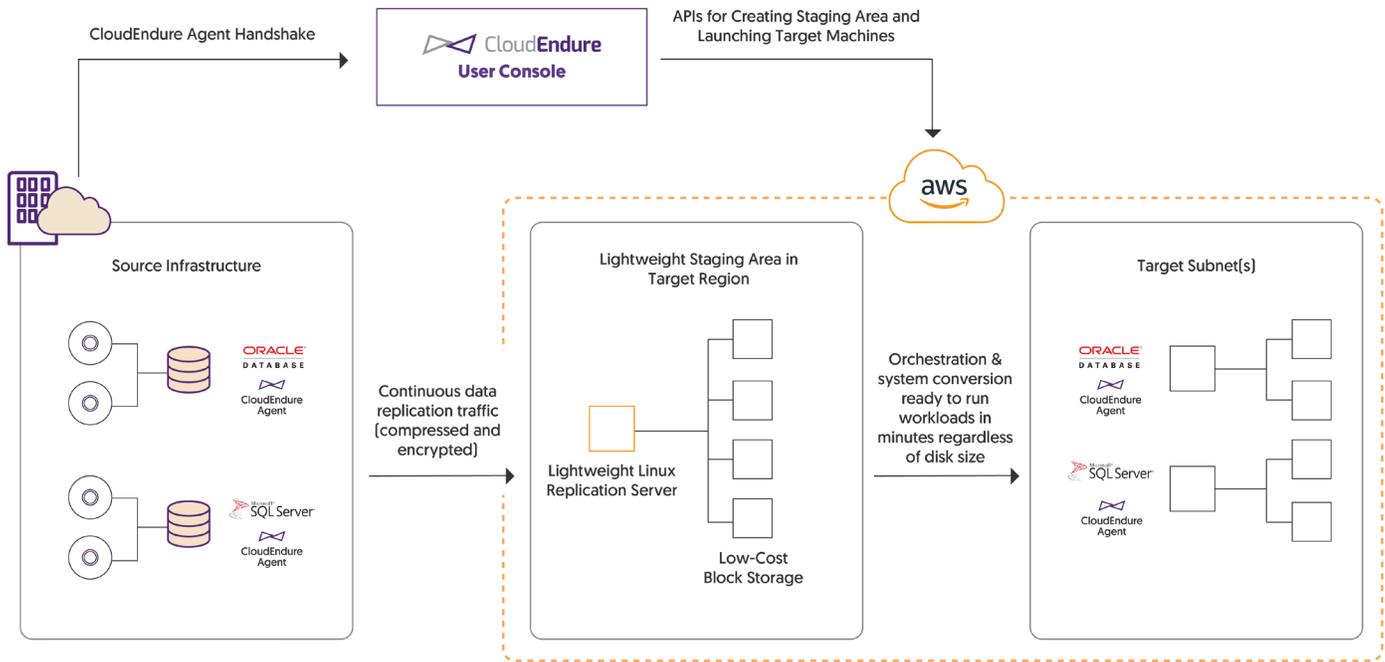

Shorten Cutover Window

Continuous Data Replication takes place without performance disruption on your source, and ensures that your applications are synced in real time, allowing for a minimal cutover window. After cutover, applications will be up to date and will run natively on AWS.

How CloudEndure Migration Works

CloudEndure enables you to replicate all applications running on supported operating systems, including legacy applications and complex databases, from any physical, virtual, or cloud-based infrastructure into AWS. Using continuous block-level replication and highly automated machine conversion and orchestration, CloudEndure simplifies and expedites the migration process, minimizes cutover windows, and decreases the potential for human error. Designed to perform large-scale migration projects with minimal performance impact, CloudEndure ensures on-time, on-budget migrations, with migrated machines running natively in AWS.

"

"We would not have finished the migration in time had we not used CloudEndure."

Bob Gelety, Director of Network Engineering at Clark Construction
